

7. Project Documentation

Project: COMIC CRAFT – Interactive Comic Story Website

Project Overview

Comic Craft is an interactive comic story website designed as an academic front-end project.

How to Run

Open the index.html file from the Project Development folder in Chrome, Edge or another modern browser.

Project Structure

The repository is organized into eight phase folders so that ideation, requirements, design, planning, development, testing, documentation and demonstration materials can be reviewed independently.

Limitations

The project is a static front-end prototype. Advanced backend services and online database integration are outside the current scope.

Future Scope

Online comic publishing, user accounts, favorites, comments, cloud storage, database integration and progressive web app support can be added later.
