Building the site in code

IN THIS FILE

5.1 Build at a glance

5.2 Code structure

5.3 Navigation & layout features

5.4 Library features

5.5 Experience features

Build at a glance

3,900+

lines of code

1

single HTML file

10

comic titles in the data

3

responsive breakpoints

What went into the file

- CSS variables for the theme
- Semantic HTML sections
- Vanilla JavaScript for search, filters, the modal, favorites, theme toggle and animations

Code structure

Styling

CSS variables drive the dark and light theme.

Structure

Semantic HTML sections make up the page.

Behavior

Vanilla JavaScript for search, filters, modal, favorites, theme toggle and animations.

Data

A comic data object drives the detail pop-up.

Navigation & layout features

Preloader

Shown first, before the hero appears

Sticky navigation

Sticky navigation with smooth scroll

Scroll reveals

Reveal-on-scroll animations

Back to top

Back-to-top button

Library features

Live search

Titles filter as you type.

Category filter

All, Marvel, Avengers, Heroes, Classics.

Detail pop-up

Driven by a comic data object; shows category and description.

Favorites

Saved with localStorage, so they survive a reload.

Experience features

Theme toggle

Switch between dark and light mode.

Toast messages

Short on-screen feedback messages.

Newsletter validation

The sign-up form checks input before it is accepted.

"/" search shortcut

Press / to jump straight to search.
